Pitch to your security team

Brief for MSP champions selling internally

Pitch to Your Security Team (Internal Brief)

Problem: Our RMM runs scripts but assessors ask for signing proof, tenant-scoped audit, and export we can drop into GRC.

Proposal: Pilot Trustholm as script orchestration layer - keep incumbent RMM for patch breadth.

What security gets

- - Enforced signing policy before execution
- - Security audit export (not just operator logs)
- - Evidence tables with honest Shipped/Gap rows
- - Subprocessor list and architecture diagram

What security should verify in trial

- - Audit export for a test script run
- - MFA + SSO configuration
- - Tenant isolation documentation

Timeline: Reviewed within two business days; 30-minute test fleet target.
