

Security one-pager — Government

ISM/PSPF consumer framing

Trustholm Security One-Pager — Government & Regulated Buyers

Headline: Technical reference material for ISM/PSPF SSP inputs—not IRAP or vendor certification claims.

What we provide

- - Schema-per-tenant PostgreSQL isolation architecture
- - Security audit export with category/datetime filters
- - Dual-custody script approval (four-eyes default)
- - Shipped/Gap evidence tables for honest RFP responses

What we do NOT claim

- - IRAP assessment or government vendor badge
- - Essential Eight product certification
- - Vendor SOC 2 Type II (observation in progress)

Consumer responsibilities

Your agency owns: network controls, IdP lifecycle, endpoint hardening, immutable log storage, IR plan execution, pentest evidence.

Verification script

Reproduce audit export in trial during assessor walkthrough—timestamped evidence beats slide decks.
